

VIVID INTERACTIONS INC.

# Product Engineer I (Frontend Web & Mobile App Development)

Location: New York, NY / Hybrid | Department: Client Experience Products | Core Level: Entry / Graduate

## About the Role

Vivid Interactions is a user-centric consumer tech platform engineering the next generation of real-time interactive workspaces. We are looking for an incoming Frontend & Mobile Product Engineer who is fiercely passionate about crafting pixels, smooth interactive micro-animations, and client-side application behavior. In this role, you will own customer-facing application surfaces, convert multi-layered Figma specs into highly re-usable layouts, and optimize client-side data binding architectures.

## Key Responsibilities

- **UI/UX Implementation:** Build and deliver pixel-perfect responsive user interfaces across mobile and web layouts using specialized component architectures.
- **State Management & Animation:** Orchestrate complex user state-tracking, offline client syncing, and frame-rate stable CSS/hardware-accelerated animations for interactive user experiences.
- **Cross-Platform Native Apps:** Design, optimize, and deploy client-side binaries targeting native mobile environments (iOS & Android) with deep platform bridging.
- **Design System Alignment:** Collaborate daily alongside UI/UX designers, running rapid interface prototyping, usability research groups, and comprehensive browser accessibility tests (WCAG AA).

## Required Qualifications (Non-Matching Profile)

- **Technical Tooling:** Absolute fluency in advanced client-side technologies, explicitly **Swift (iOS), Kotlin (Android), and Dart (Flutter)**.
- **Frontend Engineering:** Minimum 2 years of deep architectural exposure to client-side design libraries such as **TailwindCSS, Sass, Material UI, and Webpack configuration**.
- **UI Design Ecosystems:** Direct experience parsing and extracting asset files out of creative suites like **Figma, Adobe XD, or Sketch**.
- **Testing Methodologies:** Practical experience writing specialized client interface tests using frameworks like **Cypress, Selenium, or Espresso** to validate responsive rendering.
- **Design Core Competency:** Mastery of user-centered design, cross-browser compatibility pitfalls, mobile performance profiles, and localized internationalization mechanisms.

## Preferred Extras

- An active visual portfolio link showcasing live, downloadable mobile application builds on the Apple App Store or Google Play Store.
- Background or minor in Graphic Design, Human-Computer Interaction (HCI), or digital illustration.
